

PubMed Best Match Codeathon Team 3

Vasileios Alevizos, Helen-Ann Epstein, Hacer
Karamese, Kate Majewski, Sarah Nabulsi,
Brandon Patterson, Susan Schmidt, Aidy Weeks

Hypothesis

Best Match increases the prominence of familiar journals by increasing the frequency of some journals over others in users' first page of results compared to using a date sort order.

Best Match and Most Recent

Best Match Ranking: GS Cited By vs. WoS Citations

Another consideration

In order to reduce barriers for other researchers and scholars who are not able to access the training dataset and would still like to do testing in the live PubMed environment, we recommend having additional fields exportable when downloading .csv files:

- Author affiliation
- Language
- Publication Type
- MeSH Terms

Applied to Training Dataset

Outcomes

- Significant different in frequency distribution between Best Match and Date sort order
- Best Match seems to favor a more distributed set of journals in the first page of results
- Best Match has a larger distribution of dates with older articles occasionally coming up our broader search topic
- We can't confirm our hypothesis which was that the distributions should be similar for Best Match and Date sort for journal title.

Future Work

Determine if the skewed distribution represents:

- A trend in publishing, where fewer journals are published for this content area currently than in the past.
- An artifact of issue frequency: A subset of titles issuing more citations than others in recent years.
- Click through rate satisfaction by combining good reputable publishers and traffic engagement as percentage of impression.

What else?

- Encourage more participatory/broader research
 - Consider funding/providing more opportunities for more research on the behavioral side of information seeking, to help inform system development
- Improve the algorithm
 - Concise Title, broad MeSH terms, few MeSH terms, lack of abstract may over-rank Old MEDLINE records
 - Do special characters in author names or non-english articles have an effect?
 - Crowdsourcing (catching things like older articles in best match)
